📘 DIGITAL LITERACY PROJECT REPORT

CSE0001 – Digital Literacy

👤 Student Details

- **Name:** Sarthak Mene
- **Registration Number:** 25BCE10385
- **Branch:** Computer Science
- **Year:** 1st Year B.Tech
- **Course Code:** CSE0001

📖 Introduction

In today's digital age, being digitally literate is essential for academic success, professional growth, and safe online interaction. This project was undertaken as part of the Digital Literacy course, where I assumed the role of a Student Digital Ambassador. The goal was to explore various digital tools and platforms, understand online communication practices, and raise awareness about cybersecurity.

Through five structured tasks, I created a digital portfolio, explored coding and collaboration platforms, practiced professional communication, and studied cybercrime awareness. This project helped me gain practical knowledge of digital tools and develop responsible online behavior, which will be beneficial throughout my academic journey and future career.

□ Task 1 – Digital Literacy Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic focused on three main topics: the meaning of digital literacy, safe internet practices, and useful digital tools for students. The design included visually appealing icons, short descriptions, and structured sections to make the information easy to understand.

Digital literacy was explained as the ability to use digital tools effectively and responsibly. Safe internet practices included tips such as using strong passwords, avoiding suspicious links, and protecting personal data. I also highlighted useful tools like Google Docs, GitHub, and LinkedIn for academic and professional purposes.

One challenge I faced was organizing information in a visually appealing yet concise manner. However, this task improved my creativity and helped me understand how to communicate information effectively through visuals.

🌐 Task 2 – Student Digital Portfolio

In this task, I created and updated my profiles on platforms such as GitHub, LinkedIn, and HackerRank. GitHub is used for showcasing projects and coding work, LinkedIn helps in building a professional network, and HackerRank is useful for practicing coding skills.

On GitHub, I created a profile README including my name, branch, year, and learning goals. On LinkedIn, I updated my education details, including my degree and institution. These platforms help in building a strong digital presence, which is important for internships and job opportunities.

Over the next four years, I plan to use GitHub to upload projects, LinkedIn to connect with professionals, and coding platforms to improve problem-solving skills. This task helped me understand the importance of maintaining a professional online identity.

💻 Task 3 – Coding & Collaboration Platforms

For the coding practice part, I created an account on HackerRank and completed a beginner-level problem. This helped me understand basic problem-solving and coding logic.

For collaboration, I created a Google Form titled “Digital Literacy Awareness Quiz” containing five questions, including multiple choice and short answer questions. I also viewed responses through Google Sheets, which demonstrated how data can be collected and analyzed easily.

These tools are extremely useful in academics. Coding platforms help improve programming skills, while Google Forms can be used for surveys, quizzes, and data collection. This task enhanced my technical skills and showed how digital tools can simplify learning and collaboration.

📧 Task 4 – Email Etiquette

In this task, I wrote two professional emails: one requesting an assignment extension and another expressing interest in an internship. I ensured that both emails included clear subject lines, proper greetings, structured content, and professional sign-offs.

I also created a social media checklist with Do’s and Don’ts for responsible usage.

A common problem caused by poor digital communication is misunderstanding due to unclear or informal emails. For example, sending a message without a subject line or proper greeting may appear unprofessional. This can be avoided by following proper email etiquette, maintaining a respectful tone, and clearly stating the purpose of communication.

🔐 Task 5 – Cybercrime Awareness

In this task, I studied cybercrime, focusing on phishing attacks. Phishing involves tricking users into sharing sensitive information such as passwords or bank details through fake emails or websites.

While researching, I was surprised by how easily people fall victim to such scams due to lack of awareness. Many attacks appear genuine and target students through emails or messages.

As a result, I will adopt safer practices such as verifying links before clicking, enabling two-factor authentication, and avoiding sharing personal information online. This task increased my awareness of cybersecurity and the importance of staying vigilant online.

✅ Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in modern life. I learned how to use digital platforms effectively, communicate professionally, and stay safe online. The hands-on tasks helped me build practical skills such as creating a digital portfolio, designing content, and understanding cybersecurity risks.

Overall, this project has improved my confidence in using digital tools and has prepared me to guide others as a responsible digital citizen. These skills will be valuable throughout my academic journey and future career.
